Cloze Test: Read the passage and choose the best answer. A multilingual person is one who can communicate in more than one language, whether actively								
(through speaking, writing) or passively (through listening, reading). The terms bilingual and								
trilingual are used to($^{r_{\Lambda}}$) situations in which two or three languages are involved. Multilingual speakers have learned($^{r_{\Lambda}}$)one language during childhood, the so-called first language. The first								
language sometimes(ξ) referred to as the mother(ξ) is learned without formal education. A further								
possibility is that a child may become naturally trilingual by having a mother and father with separate languages being brought up in a third language country.

There are two main types of exercise: aerobic and anaerobic. Aerobic exercise works big muscles in your arms and legs. Aerobic exercise makes your muscles use oxygen faster than usual. It makes your heart and lungs work harder to supply your muscles with oxygen. Running, walking, jogging, and swimming are kinds of aerobic exercise. Aerobic exercise can help you lose weight. It can help you stay at a healthy weight. When you take in the same number of calories that you burn every day, your weight stays the same. Aerobic exercise burns calories.

Anaerobic exercise works just a few muscles at a time. Weightlifting is a kind of anaerobic exercise. Weightlifting and other kinds of anaerobic exercise make your muscles bigger and stronger. Anaerobic exercise does not require a lot of oxygen. It does not work your heart or lungs. You can only do anaerobic exercise for short periods of time because the muscles you're using quickly get tired.

- ٤٢. How does aerobic exercise keep you at a healthy weight?
- ٤٣. What will happen to your body if you do anaerobic exercise?
- ٤٤. Why can't we do anaerobic exercise for a long period of time?
- ٤٥. Name some kinds of aerobic exercise.

GOOD LUCK
